

MAGNET BORE

TELESCOPE MANDREL

The diagram illustrates the magnetic field configuration around a telescope mandrel. A grey rectangular block at the bottom represents the 'TELESCOPE MANDREL'. Above it, a series of horizontal lines represent magnetic field lines. On the left, a green vertical line marks the 'MAGNET BORE'. The field lines are divided into two groups: blue lines on the left and red lines on the right. Both groups of lines are slightly curved, sloping downwards from left to right. The blue lines are more densely packed than the red lines.
